

DIHYDROPYRIDINE DERIVATIVES FOR USE AS HUMAN NEUTROPHIL ELASTASE INHIBITORS

This application is a 371 of PCT/EP03/09120 filed 8/18/03.

present invention relates to novel dihydropyridine derivatives, processes for their
tion, and their use in medicaments, especially for the treatment of chronic
tive pulmonary diseases, acute coronary syndrome, acute myocardial infarction
rt failure development.

The fibrous protein elastin, which comprises an appreciable percentage of all protein
content in some tissues, such as the arteries, some ligaments, the lungs and the heart,
can be hydrolysed or otherwise destroyed by a select group of enzymes classified as
elastases. Human leukocyte elastase (HLE, EC 3.4.21.37), also known as human
neutrophil elastase (HNE), is a glycosylated, strongly basic serine protease and is
found in the azurophilic granules of human polymorphonuclear leukocytes (PMN).
HNE is released from activated PMN and has been implicated causally in the
pathogenesis of acute and chronic inflammatory diseases. HNE is capable of
degrading a wide range of matrix proteins including elastin and collagen, and in
addition to these actions on connective tissue HNE has a broad range of inflam-
matory actions including upregulation of IL-8 gene expression, oedema formation,
mucus gland hyperplasia and mucus hypersecretion. It also acts as a mediator of
tissue injury by hydrolysing collagen structures, e.g. in the heart after acute
myocardial infarction or during the development of heart failure, thus damaging
endothelial cells, promoting extravasation of neutrophils adhering to the endothelium
and influencing the adhesion process itself.

Pulmonary diseases where HNE is believed to play a role include lung fibrosis,
pneumonia, acute respiratory distress syndrome (ARDS), pulmonary emphysema,
including smoking-induced emphysema, chronic obstructive pulmonary diseases
(COPD) and cystic fibrosis. In cardiovascular diseases, HNE is involved in the
enhanced generation of ischaemic tissue injury followed by myocardial dysfunction
after acute myocardial infarction and in the remodelling processes occurring during
the development of heart failure. HNE has also been causally implicated in
